

Ian Kidman also had a great entry in the small 6 pan class in which he came 2nd to Cyril \*on page 1.

*Primula bracteata*, *Saxifraga exarata* v. *cdenophora*, *Androsace jacquemontii*  
*Androsace cylindrica* x *hirtella*, *Ranunculus segueiri*, *Androsace vandellii*  
 On the right is Ian's *Myosotis albosericca*

*Tristagma nivale* grown by Ian & Carole Bainbridge is an Alliaceous plant from Patagonia. It is grown in an alpine house. The colour can vary from this nice Lovat green to black or brown. Below right is their *Petrophytum hendersonii* from the Rocky Mountains. It is a cliff dweller but also thrives

on large boulders which have tumbled off the cliffs in the Big-horn Mountains of Wyoming

Celmisia allanii always a good silver plant

3 plants of Saxifraga pubescens 'Snowcap. Tom Green's large pan at the back was first, unsurprisingly. Above it like the big pan of Bolax gummifera at the back right and the light green Scleranthus uniflorus in front of it. Its good to seem more folk showing cushion and foliage plants. Good silver plants in the middle picture above

## EXAMINE YOUR SEEDLINGS CAREFULLY

Do you remember the first time you saw Margaret & Henry Taylor's hybrid *Clematis x cartmannii* 'Joe'? [BELOW LEFT] We were just getting used to having in our alpine houses the incredibly rare *Clematis marmoraria* [BELOW RIGHT] when M&HT [PICTURED BELOW] realised that one of their seedlings was different from the others. They selected it out and 'low and behold

'there was this fabulous hybrid. Others have copied the cross but the original is still the best. Great to see it shown and winning, presented by its discoverers Margaret & Henry, They named it for *Clematis x cartmannii* plantsman and nurseryman Joe Cartman from whom they received their seed.

Tom Green's Clematis hybrid 'Moonbeam' [Below] is also a *x cartmannii* hybrid but is greener in colour.

ANTI-CLOCKWISE FROM TOP LEFT  
 Dodecatheon alpinum from Lionel Clarkson

Ian Kidman's *Dionysia involucrata* 'G[teborg White' was something very special, We don't see many Dionysias in Scotland especially at this time of year.

Ian's *Primula bracteata* won the Joan Stead Trophy for Best Primula. Former club President Joan was a devotee of the genus *Primula*.

Lionel Clarkson's *Androsace villosa* was a stunner

George Young's superb 3 pan exhibit from behind
